The image shows a macOS 'Internet Accounts' window with a modal dialog for 'Outgoing Mail Server Info'. The dialog has a title bar and three buttons: 'Cancel', 'Back', and 'Create'. The 'Port' field is a text input containing '587', and the 'Use SSL' checkbox is checked. The 'Authentication' field is a dropdown menu showing 'Password'. The background window is partially obscured but shows a list of accounts with logos for vimeo and flickr, and an 'Add Other Account...' button with a help icon.
